**Indeterminate (bush):** These varieties have vines that make little or no growth once fruit is set, so they do not need pruning and may be grown with or without support. Fruit ripens within a concentrated time period, so harvest period is shorter than indeterminate varieties.

**Indeterminate (climbing/vining):** These varieties have vines that keep producing new shoots and blossoms even after fruit set, these varieties should be staked or trellised due to the vigorous nature of the plants. Fruit ripens continuously over an extended period.

**Heirloom:** Old fashioned varieties which have been grown for decades; all seed is open pollinated, plants grow true to type from seed.

**Hybrid Ft.:** Seeds developed through intentional crossing of varieties. Seed from these fruits will not produce the same fruit as the mother plant.
